SME Direct Lending — review of the Tuum prototype

Prototype Review and Questions for Tuum and the Fund

Journey stages 5–9 · Credit assessment · Decisioning · Offer and schedule · Signing and disbursement

Document ref	IOTA-SANAD-TUUM-SME-001
Version	0.1 — For partner review
Date	10 October 2026
Classification	Confidential — Commercial in Confidence
Prepared for	Tuum product team · the Fund's SME lending and credit teams
Source reviewed	Tuum SME prototype, 11 screens (received 8 and 9 October 2026)

Document Control

Version history

Version	Date	Author	Summary of change
0.1	10 Oct 2026	IOTA Solution Architecture	First issue. Review of the 11 prototype screens against the Sanad build, 26 questions, 12 inconsistencies found in the screens, and the repayment-schedule reconciliation.

Distribution

Role	Purpose
Tuum product and solution team	Answer the questions on scope, hand-offs between systems, the loan system and the offer letter
The Fund — SME lending	Confirm the product rules, documents, notifications and the journey as the Fund runs it
The Fund — credit and risk	Supply the scorecard, delegation of authority and the credit committee (MCC) rules
IOTA delivery	Record the answers and change the build where they require it

READ BEFORE ANSWERING

- 1. This reviews a prototype, not a specification.** We read the screens as the requirement and built the stages Sanad owns to match them. Where the screens disagree with each other (Section 5), we picked one reading and say which; please correct us.
- 2. No personal data.** The prototype shows an example business and its owner. None of it is reproduced here: the applicant, the partner bank and individual staff are referred to by role only.
- 3. Illustrative values.** Thresholds, weights, limits and SLAs taken from the screens are held in Sanad as configuration marked *illustrative* until the Fund confirms them. A confirmed value replaces the placeholder without a code change.

How to answer

Each question has an answer box. A short written answer is enough; where the answer is a document (the scorecard, the checklists, the delegation of authority), attaching it is better than summarising it. Each question carries a priority:

Priority	Meaning
BLOCKING	Decides a design choice. We will not build that part further without the answer.
NEEDED	We have built a reasonable default; the answer may change it.
CONFIRM	We believe we know the answer and ask you to confirm it.

Contents

1	Where the build stands	Summary for the meeting
2	The journey, stage by stage	What the screens ask for and what Sanad does
3	Questions	26 questions in five groups, with answer space
4	Positions we have taken	Choices you may want to challenge
5	Inconsistencies in the screens	12 points where the prototype disagrees with itself
6	Repayment schedule reconciliation	Screen 09 reproduced to the fil

Where the Build Stands

Sanad runs stages 5 to 7 of the journey shown on the prototype — credit assessment, decisioning, and contract and disbursement — and hands stages 8 and 9 to the loan system. Every field, figure, rule, action and integration visible on the 11 screens was traced to the build: 156 elements in all.

68 match the screen	49 built, but differently from the screen	22 built; value illustrative until the Fund confirms	11 outside Sanad by the screens' own split (stages 1–4, 8– 9)	6 not built
-------------------------------	--	--	--	-----------------------

What works today

Area	Status
Hand-over at stage 5	The application arrives from the upstream system with its applicant, product and requested terms; a repeat of the same hand-over is recognised and not duplicated.
Credit assessment	Financial figures are keyed by one person and verified by another; ratios and DBR are computed; the product's document checklist must be complete before submission.
Scoring and knock-outs	The same criteria, the 40/60 applicant–project split, the risk bands and the five knock-outs as screens 07–08. The weights are not yet the Fund's (Q3).
Decisioning	The low-risk path up to AED 500,000 and the committee (MCC) path. The committee may approve less than requested, within the risk band and product limits: the prototype's 5M / 72 months requested, 2M / 60 months approved runs end to end.
Offer and schedule	The repayment schedule on screen 09 is reproduced to the fil : instalment 34,629.18, total interest 77,750.66, every row shown (Section 6).
Letter, signing, payment	A sealed bilingual letter sent by email and SMS once per version; UAE Pass signing by reference; disbursement not before the planned date, with bureau reporting queued alongside.

The three answers that unblock the most: who owns stages 5–7 (Q1), the Fund's scorecard (Q3), and the delegation of authority for credit decisions (Q14).

What is not live yet

No integration has made a live call. AECB is keyed from the stage-4 report; UAE Pass signing, the partner-bank payment and the Tuum CIF and loan-system hand-offs run against test stand-ins; there is no Oracle ERP step or TAMM signing route, and the letter is not yet a PDF. Most of these wait on Q1, Q11, Q12 and Q13, or on sandbox access.

The Journey, Stage by Stage

The prototype shows nine stages (screens 01–02). Its legend assigns stages 1–4 to TAMM and Tuum CIF and stages 5–9 to the Tuum loan system. We built stages 5–7 in Sanad; this is the first thing to settle (Q1).

Stage (screen SLA)	What the prototype shows	What Sanad does	To settle
1–4 Application to Verification · ≤48 h	TAMM and UAE Pass intake, needs assessment, AECB and MOHRE checks, verification in Tuum CIF.	Outside Sanad. Receives the hand-over at stage 5.	What the hand-over carries (Q13); a route back to Tuum CIF (Q24).
5 Credit Assessment ≤5 days	Application and product, financial analysis and ratios, DBR, document checklist (screens 03–06).	Built. Four-eyes on every figure; checklist gate before submission; DBR shown without the card-limit lines.	DBR rules (Q4), DSCR (Q5), which product (Q6), checklists (Q16).
5→6 Scoring screen 07	Applicant and project criteria, 40/60, continuous scores, risk band.	Built with banded scores. The example scores 79.0 (LOW) against the screen's 88.4 (LOW).	The scorecard (Q3).
6 Decisioning ≤10 days	Knock-outs, risk-aligned terms, auto-approval up to AED 500k, MCC above, "per DoA", credit report notes.	Built. The low-risk path needs a second person, not automatic approval. One committee decision; no DoA tiers; no notes field.	Approved amount (Q2), DoA and MCC (Q14), terms table (Q18), auto-approval (Q26), notes (Q25).
7 Contract & Disburse ≤5 days	Offer and schedule, offer letter in two copies, TAMM/UAE Pass signing, email and SMS, partner-bank disbursement through Oracle Fusion.	Offer and schedule match. One sealed letter; signing by reference; email and SMS; single disbursement to one partner bank, as a test stand-in.	Dates (Q7), two contracts (Q10), signing (Q11), disbursement chain (Q12), wording (Q19), tranches and banks (Q21–Q23).
8–9 Portfolio, Collections	Loan system, ERP, Power BI, legal. Dashboard shows months-on-book, EWS and 60-day alerts.	Outside Sanad. Status recorded from the loan system; the alerts are not shown.	Where the alerts come from (Q20).

Questions

Questions 1–20 were raised from the screens; 21–26 arise from what we built. Screen numbers refer to the prototype's 11 screens in journey order.

A. Scope and hand-offs between systems

Q1 Is Sanad the credit engine for stages 5–7, and which system owns the stage 5–7 screens?

BLOCKING

The legend reads "Stages 5–9: Tuum LMS (credit engine + loan lifecycle)". We built stages 5–7 in Sanad and hand 8–9 to the loan system. If the loan system is to run credit assessment and decisioning, much of Section 2 moves.

Screens 01, 02, 03

Answer

Answered by · date

Q12 Which system instructs the partner bank, and what does Sanad receive back?

BLOCKING

Screen 11 shows: offer letter signed → Tuum CIF task for Finance → Oracle Fusion ERP processes the payment → bank confirms → loan system moves to stage 8. We need to know who sends the payment instruction, and whether Sanad receives the payment reference and the loan reference (screen 09 shows "Loan ref" generated by the loan system).

Screens 09, 11

Answer

Answered by · date

Q13 What is in the stage 4 → 5 hand-over?

NEEDED

The screens say "application and documents transferred automatically". Today Sanad receives the applicant, product and requested terms, but not the documents. Should the hand-over carry document references, figures already read by OCR, the AECB report reference and the applicant's consent for it?

Screen 03

Answer

Answered by · date

Q24 Should stage 5 be able to send an application back to Tuum CIF?**NEEDED**

Screen 05 has "← Back to Tuum CIF". Sanad can withdraw an application but not return it upstream. If it should, what does Tuum CIF expect to receive — a reason code, the missing items, the application as it stood?

Screen 05

Answer

Answered by · date

Q20 What raises the "EWS alert" and "60-day alert", and how do they reach the origination dashboard?**CONFIRM**

These belong to stages 8–9. Does the loan system push them to Sanad, or should the dashboard read them from the loan system? The same question applies to months-on-book.

Screen 01

Answer

Answered by · date

Q15 Is the 23-day target turnaround measured end to end, or from the hand-over?**CONFIRM**

Sanad measures turnaround from stage 5. The stage targets on screen 01 add up to about 22 days and 40 minutes, consistent with 23 days end to end.

Screen 01

Answer

Answered by · date

B. The credit decision**Q3 Please supply the Fund's scorecard: criterion weights, the scoring rule for each criterion, and the risk-band boundaries.****BLOCKING**

With the example applicant's inputs we score applicant 92.50, project 70.00, cumulative 79.00 (LOW); screen 07 shows 90.59, 86.89 and 88.37 (LOW). The criteria and the 40/60 split match; the weights for the project criteria cannot be derived from the screen, and the screen's scores look continuous where ours are banded. Also: why does "Commitment assessment" score 1.010, above the 1.000 maximum? And since 88.4% is LOW, where does VERY LOW begin?

Screens 06, 07

Answer

Answered by · date

Q14 What is the delegation of authority, and how does the MCC decide?

BLOCKING

Screen 08 says "per DoA". We have one limit (AED 500,000 for the low-risk path) and one committee decision recorded by one person. We need the composition and quorum of the MCC, any approval tiers by amount or risk above AED 500,000, and whether minutes or individual votes must be recorded.

Screen 08

Answer

Answered by · date

Q2 Who sets the approved amount when it is lower than the request?

NEEDED

The example requests AED 5,000,000 and is offered AED 2,000,000. **We built:** the MCC enters the approved amount and tenor, pre-filled with the lower of the request and the risk band's maximum, and Sanad refuses anything above the request, the band or the product. Is that right, or is the cap applied automatically, or set by the analyst?

Screens 03, 08, 09

Answer

Answered by · date

Q4 How is DBR calculated?

NEEDED

Is the credit-card instalment always 5% of the card limit (2,500 on a 50,000 limit)? Is the outstanding card balance used anywhere? Is "DBR before KF loan" the owner's personal DBR, as the screen shows, or the business's debt burden? Our DBR breakdown does not yet show the card-limit, outstanding-balance and net-disposable-income lines.

Screens 04, 06

Answer

Answered by · date

Q5 Which DSCR is correct, and how is it defined?

NEEDED

Screen 03 shows 1.72 ($310,000 \div 180,000$); the knock-out table and the credit report notes show 2.72x. We compute 1.72 from the same figures. Is DSCR net profit $\div$ total debt service?

Screens 03, 08

Answer

Answered by · date

Q18 Is there a manufacturing / non-manufacturing split in the risk-aligned terms, and are covenants counted separately from conditions?

NEEDED

Screen 08 shows "Expansion Loan Non-Manufacturing", "0-2 conditions · 0-2 covenants" and a corporate guarantee. Our terms table has no sector split and counts conditions only (three for LOW).

Screen 08

Answer

Answered by · date

Q25 What should the credit report notes contain?

CONFIRM

Screen 08 shows the analyst's free-text summary. We will add it. Is free text enough, or does the Fund use fixed headings (strengths, risks, mitigants, recommendation)? Should the notes be locked once the case goes to the MCC?

Screen 08

Answer

Answered by · date

Q26 May the low-risk path approve automatically, with no second person?

CONFIRM

Screen 08 says "STP auto-approve" up to AED 500,000. We require a second person — never the officer who submitted — to approve, even on this path (Section 4). If the Fund wants true automatic approval, please confirm the conditions and who is accountable for the decision.

Screen 08

Answer

Answered by · date

C. The products

Q6 Which product is the example application?

NEEDED

The dropdown shows Fixed Assets; the information box, header, offer and letter say Expansion Loan; the requested 72 months and the CAPEX + OPEX purpose fit Expansion. Our schedule is identical for both.

Screens 03, 04, 06-11

Answer

Answered by · date

Q8 Is the product Islamic or conventional?**NEEDED**

The letter says "Profit rate" and the partner bank is an Islamic bank, but the product is a "loan" with "interest" in the schedule. Sanad has a Shariah-compliant (Tawarruq) module that stays disabled until a Shariah board ruling is recorded.

Screens 09, 10

Answer

Answered by · date

Q9 Is the applicant's contribution a share of the facility or of the project cost?**NEEDED**

"20% · AED 400K from applicant" is 20% of the AED 2M facility. The product rules describe contribution against project cost; 20% of a 2.5M project would be 500K.

Screens 03, 09

Answer

Answered by · date

Q16 Please supply the document checklists for the products not shown, the Fund's Arabic wording, and what "ADREC verified" requires.**NEEDED**

Only the Fixed Assets checklist is on screen 05. Our grouping and Arabic labels differ from the Fund's, and the rental contract is optional in our checklist with no ADREC check.

Screen 05

Answer

Answered by · date

Q17 Please supply the parameters for Small Loan, Working Capital, 1st Time Founders and Advanced Tech & AI.**NEEDED**

Minimum amounts and tenors, grace, contribution bands, years in operation, eligible purposes and collateral. These are held as configuration; values today are illustrative.

Screen 04

Answer

Answered by · date

D. Offer, signing and disbursement

Q10 What exactly is the second contract "with the partner bank", and who signs it?

BLOCKING

Screens 09–11 say "Two contracts: one with the Fund, one with the partner bank". Is it the same letter countersigned, or a separate account or disbursement agreement? Sanad produces one letter today.

Screens 09, 10, 11

Answer

Answered by · date

Q11 How is the letter signed, and who holds the signed copy?

BLOCKING

Inside the TAMM portal (with UAE Pass behind it), or by a UAE Pass signing request sent directly from the lender's system? The email asks the applicant to sign "via your TAMM portal"; the SMS says "sign the attached FOL via TAMM".

Screens 09, 11

Answer

Answered by · date

Q7 Are the schedule dates a placeholder? What disbursement date produced the 37-day first period?

NEEDED

The offer is dated 5 June 2026 and valid to 5 July 2026, but the schedule runs from 10 September 2029. The first-row interest only works with a 37-day first period, i.e. disbursement on 4 August 2029 (Section 6). Our offer rules currently require disbursement within 60 days of the offer.

Screens 09, 10

Answer

Answered by · date

Q19 Must the email and SMS use the screens' wording exactly, and must the email attach the PDF?

NEEDED

We send a signing link rather than an attachment, and our SMS reads "your facility offer of AED ... is ready to sign until ...". The screen's SMS names the product, says "approved", and asks for signature "within 30 days via your TAMM portal".

Screen 11

Answer

Answered by · date

Q21 Are tranching disbursements needed?**NEEDED**

Screen 11 shows a "Single disbursement" dropdown, which suggests other options. Fixed-asset and expansion financing often pays out against milestones. Sanad supports a single disbursement today.

Screen 11

Answer

Answered by · date

Q22 Does the Fund work with more than one partner bank, chosen per application?**NEEDED**

Screen 11 shows a partner-bank dropdown. Sanad has one partner bank per institution, set in configuration.

Screen 11

Answer

Answered by · date

Q23 Is "Awaiting bank KYC" a step in stage 7, and which system reports it?**CONFIRM**

A card on the dashboard shows this state. Sanad has no partner-bank KYC state; if the bank must complete KYC before disbursement, we need to know how its result reaches us.

Screen 01

Answer

Answered by · date

Positions We Have Taken

Where the screens left a choice open, or where a control matters more than matching the screen, we chose as follows. Each is configuration or a small change if the Fund decides otherwise, except where marked as a control.

Position	Why
Four eyes on every decision CONTROL	The person who submits a case never approves it, on either path; figures and documents are verified by someone other than the person who entered them. See Q26.
Approved terms within bounds CONTROL	An approved amount or tenor above the request, the risk band or the product's limits is refused, and the reason is recorded.
No disbursement before the planned date CONTROL	Payment is refused before the disbursement date in the signed offer.
Bureau reporting with every disbursement	The new facility is reported to the credit bureau as part of the same step, so it cannot be forgotten. Not shown on the screens.
Contact details held masked	Sanad does not keep the applicant's email or mobile in clear; notifications go out by reference. The screens show them unmasked.
Signatories by role	The offer letter names signatories by role, never by person.
Both languages, always	The letter and notifications are always in Arabic and English, rather than a language choice.
Sealed offer letter	Each version of the letter is sealed with a fingerprint, so a changed letter is a new version and must be re-sent. A PDF copy follows once the document platform is licensed.

Inconsistencies in the Screens

These are points where the prototype disagrees with itself. We note which reading the build follows; please tell us which is correct.

#	Inconsistency	Screens	Build follows
1	Offer dated 5 June 2026, valid to 5 July 2026; schedule runs 10 Sep 2029 → 10 Aug 2034.	09, 10	Schedule reproduced as shown; dates to confirm (Q7).
2	Product dropdown shows Fixed Assets; info box, header, assessment, offer, letter and notifications say Expansion Loan.	03–04 vs 06–11	Either; the schedule is the same (Q6).
3	AED 5,000,000 over 72 months requested against a Fixed Assets product capped at 2M and 60 months; 2M over 60 offered.	03, 09	Committee approves the lower terms (Q2).
4	DSCR 1.72 on the application, 2.72x in the knock-outs and credit notes.	03, 08	1.72, computed from the figures (Q5).
5	Credit assessment dated 21 May 2026, before the 4 June 2026 hand-over.	03, 06	Assessment after hand-over.
6	"Commitment Assessment" scores 1.010, above the 1.000 maximum.	07	Scores capped at 1.000 (Q3).
7	Project criteria average 0.7675 unweighted, yet the section total is 0.8689; weights not shown.	07	Illustrative weights (Q3).
8	"Active applications 23" matches neither stages 5–7 (16) nor 5–9 (51) on the board.	01	Count of stages 5–7.
9	Contribution "20% · AED 400K" is 20% of the facility; the product rules define it against project cost.	03, 09	Share of the facility (Q9).
10	"Profit rate" in the letter for a "loan" with "interest" in the schedule.	09, 10	Conventional (Q8).
11	Purpose "CAPEX + OPEX Mix" offered with Fixed Assets selected.	03	Purpose checked against the product.
12	Email: sign "within 30 days via your TAMM portal"; screen 09: sent via TAMM for UAE Pass signature; SMS: "sign the attached FOL via TAMM"; the letter is described both as attached and as two copies.	09, 11	Signing link by UAE Pass reference (Q11, Q19).

Repayment Schedule Reconciliation

Sanad's quotation, given the inputs below, reproduces every figure shown on screen 09. AED 2,000,000.00; 60 monthly instalments; 1.50% a year on the reducing balance; no grace; payment day 10; disbursement 4 August 2029.

#	Due date	Days	Opening	Principal	Interest	Instalment	Closing	Screen
1	10 Sep 2029	37	2,000,000.00	31,588.08	3,041.10	34,629.18	1,968,411.92	MATCH
2	10 Oct 2029	30	1,968,411.92	32,202.37	2,426.81	34,629.18	1,936,209.55	MATCH
3	10 Nov 2029	31	1,936,209.55	32,162.50	2,466.68	34,629.18	1,904,047.05	MATCH
4	10 Dec 2029	30	1,904,047.05	32,281.72	2,347.46	34,629.18	1,871,765.33	MATCH
5	10 Jan 2030	31	1,871,765.33	32,244.60	2,384.58	34,629.18	1,839,520.73	MATCH
58	10 Jun 2034	31	103,626.09	34,497.16	132.02	34,629.18	69,128.93	MATCH
59	10 Jul 2034	30	69,128.93	34,543.95	85.23	34,629.18	34,584.98	MATCH
60	10 Aug 2034	31	34,584.98	34,584.98	44.06	34,629.04	0.00	MATCH
Total		1,832		2,000,000.00	77,750.66	2,077,750.66		MATCH

Conventions that make it match

Day count	Actual/365. Interest for a period = opening balance $\times$ 1.50% $\times$ actual days $\div$ 365, rounded half-up to the fil.
Instalment	Level on every row but the last: the smallest whole-fil amount whose final instalment does not exceed it. The last instalment clears the balance (34,629.04).
What does not match	A plain monthly annuity (rate $\div$ 12, 30/360) gives 34,619.78 — so the loan system uses actual days, as above.
Disbursement date	Not shown on the screen; inferred . First-row interest 3,041.10 = 2,000,000 $\times$ 1.5% $\times$ 37 $\div$ 365. With 36 days it would be 2,958.90; with 38 days, 3,123.29. So the first period is 37 days and disbursement 4 August 2029 (Q7).
APR	Sanad computes 1.51% from the dated cash flows. The screens show no APR; please confirm whether the Fund discloses one.

Please confirm that these conventions are the loan system's — in particular half-up rounding per period and the last instalment absorbing the remainder — so that Sanad's offer and the loan system's schedule cannot drift apart on any other amount or tenor.
